

Plowdown & Conservation Seed Mixtures

PRODUCT INFORMATION:

A major challenge facing farmers today is to include cultural practices that ensure soil health and viability, not only for their own production benefits, but also for the preservation of a healthy land base for generations to come.

Plowdown and conservation seed should be purchased with the same considerations for quality as given seed for new alfalfa fields or pastures. Poor seed selection can result in the introduction of new weeds, in poor stands or in less than effective establishment. PICKSEED pays the same level of attention to quality for this conservation seed as we do for all our varieties and mixes. A small additional investment in quality will ensure total satisfaction and positive results.

PLOWDOWN

	SINGLE CUT RED CLOVER	ALFALFA	ITALIAN ANNUAL RYEGRASS
PICKSEED 501	35%	55%	10%
PICKSEED 503		90%	10%

Seed at 5 kg/ac

GREENFIELD MIXTURE

	WHITE CLOVER	BASTION PER. RYE	FESTORINA TALL FESCUE	CREEPING RED FESCUE	CHEWING'S FESCUE	TIMOTHY	KENTUCKY BLUEGRASS
Greenfield	10%	15%	25%	15%	10%	15%	10%

For grass waterways & pond banks seed at 40 - 50 kg/acre. For buffer strips, the seeding rate can be reduced to 20 kg/acre.
