

TECHNOLOGIES

Protect Your Technologies Follow Insect Resistance Management (IRM)

Preserve Herculex and YieldGard technologies and reduce the potential risks of pest resistance by planting a refuge and following all IRM requirements.

When Planting All YieldGard and Herculex I Hybrids:

- Refuge: Plant a minimum of 20% of your acres with non-Bt hybrids
- If planting your refuge in strips, use a minimum of four rows per strip
- Never mix Bt and conventional seed
- Plant your refuge within 400 meters (1/4 mile) of the Bt hybrid

When planting YieldGard Corn Borer and Herculex I hybrids:

- Plant your refuge within 400 meters (1/4 mile) of the Bt hybrid
- Plant Bt and refuge hybrids of similar maturity and at the same time
- Do not use insecticides in the refuge to control European corn borer

When Planting YieldGard VT Triple hybrids:

- Plant your refuge adjacent to or within fields planted with Bt hybrids
- The refuge can be treated with insecticide to control corn rootworm
- Refuge and Bt planting areas should follow the same crop rotation plans
