

## FUTURA BOULEVARD

### SALT TOLERANT MIX

#### DESCRIPTION:

Soils can become contaminated with sodium chloride and calcium chloride along roadsides, sidewalks, and in coastal areas. Most turf grasses are very sensitive to higher levels of salt which results in weak plants, or complete desiccation. This usually creates an unsightly collection of various broadleaf weeds which have a greater tolerance to salt.

#### USAGE:

PICKSEED's Futura Boulevard is a mixture of turf grasses which have the highest natural tolerance to salty soils. With proper soil management and annual overseeding with Futura Boulevard, an attractive, dense turf is possible, that can be mowed and managed the same as any roadside turf mixture.

#### ADAPTATION:

- Futura Boulevard establishes quickly
- Rich green color
- Excellent shade tolerance
- Tolerates contaminated soil
- 

#### LIMITATIONS:

The species are not aggressive sod formers so following recommended seeding rate is required to achieve the desired plant population.

#### SEED RATE:

150 kg / hectare.

*\*Spring or late summer seeding is recommended*

#### TECHNICAL PRODUCT SPECIFICATIONS

40% SeaLink Creeping Red Fescue

25% Spartan II Hard Fescue

20% Québec Perennial Ryegrass

10% Fults Alkaligrass

5% Red Top

*\*Mixture percentages and varieties may change at any time*
