

PREMIUM KENTUCKY BLUEGRASS BLEND

General Description

Premium Kentucky Bluegrass Blend provides a high density turf with aggressive growth for fast repair and recovery. Premium Kentucky Bluegrass offers broad adaptability, has excellent disease resistance performing well in drought and shaded conditions. Good performance for this blend has been noted under reduced fertilization rates.

Usage

Premium Kentucky Bluegrass Blend is a specially formulated seed mixture designed for new turf and overseeding applications for golf course fairways, tees and roughs. The blend is has been created with the four major Kentucky Bluegrass 'Types' to provide maximum genetic diversity and reliability.

Adaptation

- Excellent disease resistance
- Good heat & drought tolerance
- Excellent vigor for fast recovery and repair
- Low, compact growth
- Good shade tolerance
- Fine leaf texture, High density
- Excellent sod strength
- Performs well under multiple cutting heights

Mixture

30% Moonshadow Kentucky Bluegrass

30% Quantum Leap Kentucky Bluegrass

20% America/Langara Kentucky Blugrass

20% Touchdown Kentucky Bluegrass

Limitations

Kentucky bluegrass is relatively slow to germinate. Allow 2-3 weeks for initial germination under adequate moisture conditions.

Seed Rate

New Lawn: 1-2lbs/1000ft² (.5-.75/100m²)

Overseeding: 1.5-3lbs/1000ft² (.75/1.3kg/100m²)

Note: Late summer or early fall is the best time for seeding Kentucky Bluegrass

**Increase seeding rates to quicken establishment*
