

VALU-GREEN

General Description

VALU-GREEN will produce a turf of low to mid density with lighter green color. The Annual ryegrass portion germinates and develops rapidly. However, fairly quick clipping should be maintained to permit establishment of the slower developing fescue and bluegrass components.

Fertilize at mid levels, i.e. 1 - 1.5 kg/100m²

Benefits from good weed control throughout the establishment process.

Usage

Ground cover – an inexpensive, easy turf

Green cover – beautify areas

Dust and mud control on damaged areas

Other low intensity use turf areas – yards, berms, roadsides

Temporary turf – seed and reseed as required

Mixture

40% Creeping Red fescue

20% Annual ryegrass

40% Kentucky bluegrass

Limitations

Will not tolerate mowing less than 2.5cm

Seed Rate

2.5 kg/100m² or 5 lbs./1,000 sq. ft.

**Mixture percentages and components may change at any time*
