

DairyPro Hay Mixture

What is it?

High quality, high producing Alfalfa Timothy mix designed for producers looking for a mixture that will provide their high production animals with a balanced hay containing high protein and energy.

Why grow it?

Features	Benefits
Multi cut mixture	➔ The alfalfa and timothy varieties used in this mixture are fast regrowing, allowing for multi cuts of hay every year and producing high quality and yield
Excellent quality	➔ High quality hay is produced cut after cut with this mixture, ideal for dairies and any other high performance livestock
Persistence	➔ Maintains high yields under a medium rotation system
Excellent winter hardiness	➔ Adapted to Western Canada's weather conditions

How to grow it...

Seeding Information	Adaptations	Management
10-12 lbs/ac of inoculated seed	Well drained soils preferred	Harvest at late bud/early bloom for best quality and yield results
Seed ¼ to ½ inch deep	Adapted to the Black, Dark Brown, Grey Luvisol soil zones and under irrigation	Establishment year can provide producers with at least one cut of hay, depending on seeding date and growing conditions
Seed bed should be firm; packing may be required	Excellent winter hardiness	Fertilize according to soil tests; phosphate, potash and sulfur required
