

Futura 2000 is a perennial favorite. The product of time and tradition, 2000's consistent great looks, high performance and affordability have made it the long-time choice of turf professionals everywhere.

## FUTURA 2000

PERENNIAL RYEGRASS

### **DESCRIPTION:**

Futura 2000 is the original high-performance ryegrass blend. Over the years, Pickseed has developed the new, more technically advanced varieties that make up Futura 2500 and Futura 3000. But turf professionals everywhere continue to trust Futura 2000's great looks, outstanding performance and consistency.

Futura 2000 exhibits deep green color and fine-leaved appearance in a variety of geographic applications and growing conditions. Its rapid establishment, ease of maintenance, and hardiness make it a great choice wherever a turf-type perennial ryegrass is needed. With varieties such as Cutter, Express, Edge and Fiesta 3, varieties that have proven themselves time and again, you know you can count on Futura 2000 to look great and work hard.

### **SEEDING:**

Futura 2000 is fast. In warm soils, germination can be expected in 5 – 7 days. Pickseed recommends a seeding rate of 5 – 7 lbs. per 1000 sq. ft. in the north. For overseeded southern golf course greens, 30 – 40 lbs. of Futura 3000 per 1000 sq. ft. gives best results. In normal, warmer soil circumstances, you can expect germination in 5 – 7 days.
