

Looking for a ryegrass that's appropriate for every occasion? The Futura family of blended ryegrass from Pickseed is carefully crafted according to our time-honored standard. Each blend is a distinctive combination of elite varieties, selected for optimal performance.

FUTURA 3000

PERENNIAL RYEGRASS BLEND

DESCRIPTION:

Futura 3000 is Pickseed's premium blend, a cutting edge combination of the newest and best turf-type perennial ryegrasses available. This blend is frequently updated, and can be customized for geographically-specific application. In any location, for any occasion, Futura 3000 is sure to satisfy the most discriminating tastes. Futura 3000 sets the standard for high-performance ryegrass blends. It features a very dark green color and fine-leafed appearance, and is tolerant of drought, heat and low mowing heights.

A blend comprised of Pickseed's newest and best perennial ryegrasses, Futura 3000 elite in color and performance. With three high end varieties like Fiesta 3, Québec and Blazer 4, it continues to impress. Fiesta 3 continues the great tradition of the original Fiesta and its successor Fiesta II. It is the third selection from within this great bloodline. Fiesta 3 has excellent resistance to most important diseases such as Leaf Spot, Red Thread, Brown Patch and Dollar Spot. It has excellent salt tolerance, being one of the very best varieties available. It was a top performing variety among all tested in the NTEP trials. With outstanding color, quality and disease resistance, Fiesta 3 is one of the best among all varieties of perennial ryegrass.

Developed in Canada, Québec is the most winter hardy variety of turf type perennial ryegrass now available. It is especially well adapted for use in Canada and the northern US. It has excellent seedling vigor and establishes quickly and is ideal for use in overseeding existing turf. Québec has a medium dark green color with a finer leaf texture and very good turf quality. It mixes very well with Kentucky bluegrass and fine fescue.

Blazer 4 follows in Pickseed's traditional line of "Blazer" varieties, being the fourth and most advanced representative of this outstanding series of varieties. Blazer 4 had excellent NTEP scores and has been very widely used everywhere in North America. It is also an important international variety, being successfully used in many overseas markets. Blazer 4 is a fast starting but lower growing variety. It's overall disease resistance is excellent. It forms a dense, fine leafed high quality turf of exceptional toughness and beauty.

SEEDING:

Futura 3000 is fast. In warm soils, germination can be expected in 5 – 7 days. Though it establishes quickly, Futura 3000 demonstrates a lower growth habit, so it requires less maintenance. Pickseed recommends a seeding rate of 5 – 7 lbs. per 1000 sq. ft. in the north. For overseeded southern golf course greens, 30 – 40 lbs. of Futura 3000 per 1000 sq. ft. gives best results. In normal, warmer soil circumstances, you can expect germination in 5 – 7 days.
