

Forage Brassica

Caledonian

Kale

- An improved Marrow stem type. A tall plant with good lodging resistance
- Caledonian is a very high yielding kale with 4.7 ton DM / acre potential
- Club root resistance allows for continual use on clubfoot infected sites
- Excellent for dairy and beef cattle. Can be trip or zero grazed
- An ideal full season game cover crop
- Superior winter hardiness allows grazing from August through March
- Plant between mid April and July for best results
- Plant rate: 4.5 lbs. / acre drilled, 7 lbs. / acre if broadcast

Hobson

Forage Rape

- Excellent catch crop, ideal for finishing lambs or flushing ewes
- Optimum sewing season – June – August
- Ready to utilize within 10 – 12 weeks of sewing
- Powdery Mildew resistance improves animal intake and minimizes wastage
- Up to 1.8 tons DM / acre / season
- Plant rate: 5 lbs. / acre drilled, 9 lbs. / acre if broadcast

Interval

Forage Rape

- Excellent for finishing lambs, flushing ewes or summer strip grazing for cattle
- Optimum sewing season – June – August
- Ready to utilize within 10 – 12 weeks of sewing
- Powdery Mildew resistance improves animal intake and minimizes wastage
- Up to 1.8 tons DM / acre / season
- Plant rate: 5 lbs. / acre drilled, 9 lbs. / acre if broadcast

Keeper

Kale

- A medium-short grazer type ideal for fattening lambs
- Demonstrates a high leaf to stem ratio resulting in high animal intake
- Keeper has low SMCO levels assuring improved nutritional values
- Excellent winter hardiness and resistance to lodging – excellent for game cover
- An ideal replacement to Maris Kestrel
- Nearly 4 ton DM / acre yield potential over the grazing season
- Plant between mid April and July for best results
- Plant rate: 4.5 lbs. / acre drilled, 7 lbs. / acre if broadcast

<p>Pinfold Kale</p>	<ul style="list-style-type: none"> ▪ A medium-tall grazer type ideal for fattening lambs ▪ Demonstrates a medium leaf to stem ratio ▪ Good winter hardiness provides long grazing season and good game cover ▪ Excellent winter hardiness and resistance to lodging ▪ 4.3 ton DM / acre yield potential over the grazing season ▪ Plant between mid April and July for best results ▪ Plant rate: 4.5 lbs. / acre drilled, 7 lbs. / acre if broadcast
<p>Rondo Stubble Turnips</p>	<ul style="list-style-type: none"> ▪ Rondo produces a small, green skinned bulb with excellent rooting quality ▪ Suitable for both sheep and cattle ▪ Best sown in spring or early fall ▪ Maximum production 60 – 70 days after planting ▪ Over 1.5 ton DM / acre yield potential (includes leaf and bulb) ▪ Improved winter hardiness ▪ Small bulbs make Rondo an excellent choice for hillside applications ▪ Excellent companion species to Italian ryegrass or forage rape ▪ Plant rate: 4.5 lbs. / acre drilled, 7 lbs. / acre if broadcast
<p>Samson Stubble Turnips</p>	<ul style="list-style-type: none"> ▪ Samson produces a large, takard shaped root palatable to sheep and cattle ▪ Large bulb anchors plants firmly in ground for minimal uprooting and wastage ▪ Best sown in spring or early fall ▪ Maximum production 70 – 80 days after planting ▪ Over 2.2 ton DM / acre yield potential (includes leaf and bulb) ▪ Plant rate: 4.5 lbs. / acre drilled, 7 lbs. / acre if broadcast
