

Looking for a ryegrass that's appropriate for every occasion? The Futura family of blended ryegrass from Pickseed is carefully crafted according to our time-honored standard. Each blend is a distinctive combination of elite varieties, selected for optimal performance.

## FUTURA 2500

RYEGRASS BLEND

### **DESCRIPTION:**

Futura 2500 is an outstanding perennial / intermediate ryegrass blend due to a special ingredient: Pickseed's patented Transist™ 2400 transitional ryegrass. For overseeding applications, no other blend matches 2500's rapid establishment, high turf quality and performance, and quick, complete springtime transition.

Futura 2500 has established a revolutionary new performance standard for intermediate ryegrasses. With its combination of great looks, excellent mowability and rapid spring-time transition, Futura 2500 is the ideal choice for applications where perennial ryegrass is too persistent but high turf quality and performance is necessary.

Futura 2500 has a special ingredient. Transist™ 2400 was developed by Pickseed specifically for overseeding applications, through a series of crosses between perennial and annual ryegrasses. Transist™2400 demonstrates the high turf quality characteristics of its perennial ryegrass roots, while emulating the rapid establishment, low persistence, and economy of its annual ryegrass ancestors.

### **ESTABLISHMENT:**

Futura 2500 starts fast and finishes clean. With the fast starting Transist™2400, Futura 2500 will establish more quickly than straight perennial ryegrasses. The turf quality during the growing season is equal to that of the best perennial ryegrass blends, but the transition characteristics will be much improved over 100% perennial ryegrass.
